Drawing Chemical structures Using chemdraw

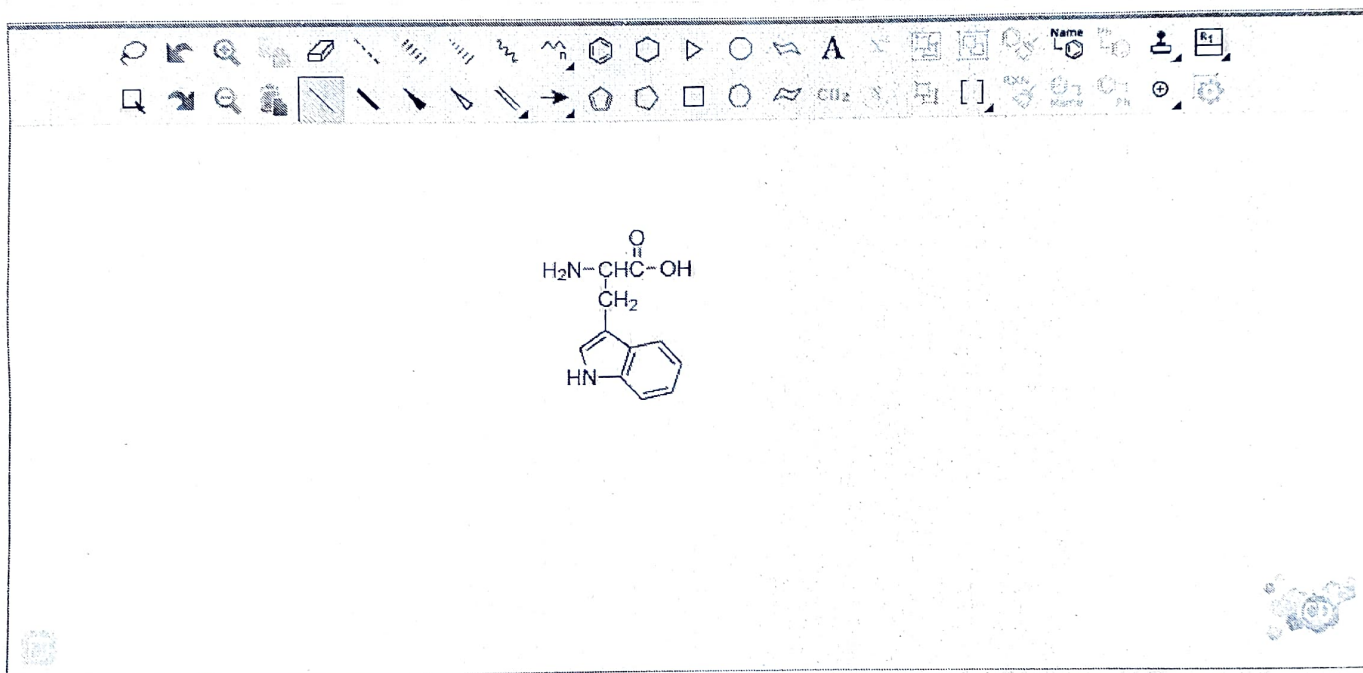

Getting Started

ChemDraw JS is a chemical structure drawing and editing tool designed to help you create high-quality chemical drawings. ChemDraw JS consists of a drawing toolbar and document window. The document window lets you draw and edit chemical structures using the various drawing tools available in the ChemDraw JS toolbar. This section introduces the ChemDraw JS user interface and ChemDraw JS toolbar.

ChemDraw JS Standard User Interface

The following is an example of a typical ChemDraw JS user interface:

Note: The user interface and toolbar may vary depending on the configuration of your ChemDraw JS application.

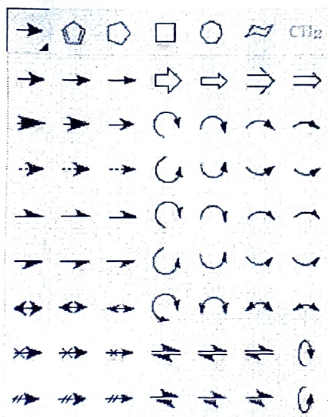

ChemDraw JS Main Toolbar

The most common tools are included on the main toolbar. These include the bond, text, ring, and selection tools necessary for drawing structures.

Secondary Tools

Some tools on the main toolbar have secondary tools associated with them. These are indicated by a small black triangle in the lower right corner. Long-click on the icon to show the secondary tools.

For example:

The following drawing tools are available on the ChemDraw JS toolbar.

12/8/21, 3:24 PM

Getting Started

Note: The tools in the toolbar may vary depending on the configuration of your ChemDraw JS application. Hence, it is not necessary that you see all the tools mentioned below in your toolbar.

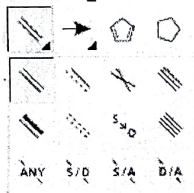

Tools	Description
	Lasso Make freehand selection of irregular areas
	Marquee Selection Select all or part of a molecule, reaction, or any other object or text string within a rectangle
	Undo Cancel your last action and go back to the previous state (can be applied multiple times)
	Redo Redo an action (can be applied multiple times)
	Magnify View an enlarged view of objects
	Reduce Reduce the size of objects
	Copy Copy the current drawing area drawing/content.
	Paste Paste drawing/content into the drawing area.
	Eraser Remove all or sections of objects
	Solid Bond Draw single bonds
	Dashed Bond Draw dashed bonds
	Bold Bond Draw bold bonds
	Hashed Bond Draw hashed bonds
	Wedged Bond Draw wedged bonds
	Hashed Wedged Bond Draw hashed wedged bonds
	Hollow Wedged Bond Draw hollow wedged bonds
	Wavy Bond Draw wavy bonds

Determination of the physicochemical properties using Software

Aim - Determination of physicochemical properties such as $\log P$, $C \cdot \log P$, MR, molecular weight, HBD, HBA, LR_{05} for class of drugs.

Principle -

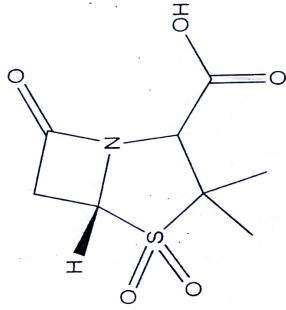

Nearly 40% of drug candidates fail in clinical trials due to poor ADME (absorption, distribution, metabolism, & excretion) properties. These late-stage failures contribute significantly to rapidly escalating cost of new drug development. The ability to detect problematic candidates early can dramatically reduce the amount of wasted time & resources & streamline the overall development process.

Accurate prediction of ADME properties prior to experimental procedures, such as HTS, can eliminate unnecessary testing on compounds which will ultimately fail. ADME prediction can also be used to focus lead optimization efforts to enhance the desired properties of given compound. Finally incorporating ADME predictions as a part of development process can generate lead compounds that are more likely to exhibit satisfactory ADME performances during clinical trials. In consideration of the above points, ^{which} highlight the importance of physicochemical properties & drug likeness we have used 'ChemDraw' & SwissADME software to

predict the physicochemical properties & drug-likeness of the class of drugs.

Sr No.	Name of physicochemical property / Drug likeness parameter	Reccomended values
1	Molecular weight	≤ 500
2	Hydrogen Bond donor	≤ 5
3	Hydrogen Bond Acceptor	≤ 10
4	Log P or C log P	≤ 5
5	Lipinski rule of 5 / Rule of five	maximum is 4
Compounds that satisfy the above rules are considered drug-like.		
6.	Q _p log P _{ow} (predicted octanol water partition coefficient)	-2.0 to 6.5
